

**I don't understand
how to use git and github**

Hi, I'm Rohit, Admin of codingkite__

Hello! I'm Rohit, a content creator and frontend developer. This ebook is all about my skills in using AI for productivity, building websites,

Don't forget to connect

What are Git and GitHub?

Git:

- **What it does:** Git helps you keep track of changes you make to files, like a time machine for your work.
- **Why it's useful:** It allows multiple people to work on the same project without overwriting each other's work.

GitHub:

- **What it does:** GitHub is like a website where you can store your project's files and track changes using Git.
- **Why it's useful:** It lets you work with others easily, keep backups of your work online, and showcase your projects.

Why should you learn Git and GitHub?

- **Version Control:** Helps you see what changes were made and when, and allows you to go back to earlier versions if needed.
- **Collaboration:** Makes it easier for teams to work together on projects, combining everyone's work seamlessly.
- **Backup:** Keeps your work safe online so you don't lose it if something happens to your computer.
- **Showcase:** Lets you share your projects with others, which is great for job hunting or getting feedback.

Differences between Git and GitHub

- **Git:** A tool you install on your computer to manage changes to your files.
- **GitHub:** A website where you can store your projects and work with others using Git.

How to start using Git and GitHub

GitHub:

- **What it does:** GitHub is like a website where you can store your project's files and track changes using Git.
- **Why it's useful:** It lets you work with others easily, keep backups of your work online, and showcase your projects.

Install Git:

Download and install Git from git-scm.com.

Set up Git:

Configure your name and email using:

```
1 git config --global user.name "Your Name"
2 git config --global user.email "youremail@example.com"
```

Create a GitHub Account:

Sign up for GitHub at github.com.

Create a Repository:

On GitHub, click on "New" to create a new repository.

Clone the Repository:

- Copy the repository URL from GitHub and use

```
1 git clone <repository-url>
```

Make Changes and Commit:

Modify files in your local repository, then stage and commit changes

```
1 git add .  
2 git commit -m "Commit message"
```

Push Changes to GitHub:

Upload local repository changes to GitHub

```
1 git push origin main
```

Common Git Commands and GitHub Techniques

Basic Git Commands:

git init: Initialize a new Git repository.

git add <filename>: Stage changes for commit.

git commit -m "Commit message": Commit staged changes with a message.

git push origin <branch>: Push changes to a remote repository.

git pull origin <branch>: Fetch and merge changes from a remote repository.

git status: Show the status of files in the repository.

git log: View commit history.

GitHub Techniques:

- **Branching and Merging:** Create branches for features or fixes, then merge them back into the main branch.
- **Pull Requests:** Propose changes and request feedback from collaborators before merging them into the main branch.
- **Issues and Labels:** Track tasks, bugs, and enhancements with labels and milestones.
- **Collaboration:** Fork repositories, contribute via pull requests, and review others' code.

Resources for Learning Git and GitHub

- Official Git Documentation: git-scm.com/doc
- GitHub Learning Lab: Interactive tutorials at lab.github.com
- YouTube Tutorials: Search for beginner Git and GitHub tutorials for practical demonstrations.
